

Aerial Intelligence for Insurance Brokers

At a glance

Three Weave provides drone-based aerial inspections of roofs, external envelopes and grounds for your commercial and property-owning clients. We help you evidence risk, support fair claims outcomes and give clients clearer insights into the condition of their buildings.

The Broker Opportunity

Strengthen Your Advice

Support faster, clearer claims

Reduce avoidable losses

Differentiate your service

How it works in practice

Identify suitable clients or sites

Aging stock, complex roofs, heritage or hospitality.

Three Weave conducts inspection

We handle flight planning, safety and data permissions.

You get a visual intelligence pack

High-resolution images and concise observations.

You deploy in your workflow

Use in claims, risk, and review meetings

Where this adds the most value

Weather-exposed roofs and tall or complex buildings that are hard to inspect from ground level.

Portfolios with repeated minor water ingress or storm claims where underlying defects may not be fully understood.

Heritage, ecclesiastical, multi-let and block of flats risks where visual context helps all parties agree priorities.

Pre-Renewal or mid term reviews where you want to demonstrate proactive risk management to both client and insurer.

Next steps

If you have clients with challenging roofs, repeated weather related issues or upcoming renewals, let us show you how aerial intelligence can shorten claim journeys, reduce leakage and improve client conversations.

What Three Weave provides

Drone-based external imagery focused on roofs, rainwater goods, chimneys, parapets and other high-level features.

A clear, non-technical observational summary to support discussion (not a structural survey of formal specification).

A secure digital pack you can share with clients, insurers and contractors as appropriate.

Why work with us

Our Specialist focus is on heritage and hospitality property aligned with property insurance needs.

We are independent. Providing evidence based outcomes and flexible engagement for preventative maintenance.
